

The upgrade your competitors **can't** offer.

Intelligent, automatic storm protection — added to the shutters you already install.

Shutters today are only as good as the person who remembers to close them. **Keldoris is the brain that makes them act on their own** — it watches the weather at the property, closes the shutters before the storm arrives, warns whoever's home, and does it safely. It's a premium add-on your tech installs during the visit you're already making.

HOW IT PROTECTS THE HOME

● Watches

Reads wind & rain at the property, minute by minute.

● Warns

A 30-second spoken countdown, a phone alert, porch lights flash.

● Closes

Shutters close on their own — no phone, no person needed.

● Tells

The homeowner is notified — honest confirmation, every time.

WHY IT'S DIFFERENT

- ◆ **It decides, not just obeys.** Others sell "smart integration" — an app button. Keldoris watches the weather and acts automatically.
- ◆ **Hyperlocal.** It reacts to the fast pop-up storm a regional forecast misses — and closes even when no one's home.
- ◆ **Warns, never slams.** A dumb auto-close can shut on someone. Keldoris always warns first — and anyone can tap HOLD to cancel.

WHY DEALERS ADD IT

- ◆ **New revenue,** at an install you're already doing — near-zero added truck time.
- ◆ **A real differentiator** — the only shutters in the market that protect the home on their own. It helps close the shutter sale.
- ◆ **Fewer angry calls.** The system watches itself and can flag you proactively — so you reach out before the customer complains.

WHAT YOU INSTALL

The Keldoris unit

The pre-configured brain of the system.

On-site weather sensor

Hyperlocal wind & rain at the property.

Wall button

One-press safe close by the door — no app.

App, alerts & warnings

Simple homeowner screen, push & spoken alerts.
